

Cell Cycle Spinner: Bottom

Label the stages of the cell cycle in each of the outer portions of the wheel. The labels should be G_1 , S, G_2 , Prophase, Metaphase, Anaphase, Telophase, and Cytokinesis. After you have them labeled, use your textbook or technology and briefly write a description of what is happening in each phase. Cut out the circles and stack the top above the bottom. Push the brad through to create your cell cycle spinner.
